AWS CLOUD CLUB · PROJECT PITCH

Hill

Everything happening on the Hill, in one app — so you can find your people.

AI-powered · Serverless on AWS · Three-week build

THE IDEA

Everything happening on the Hill, in one app

THE PROBLEM

Students want to meet people, but events hide in elevator flyers and group chats they're not in.

Live map

What's happening right now

Hangouts

"Boba at 8 in Rieber lobby"

Interest alerts

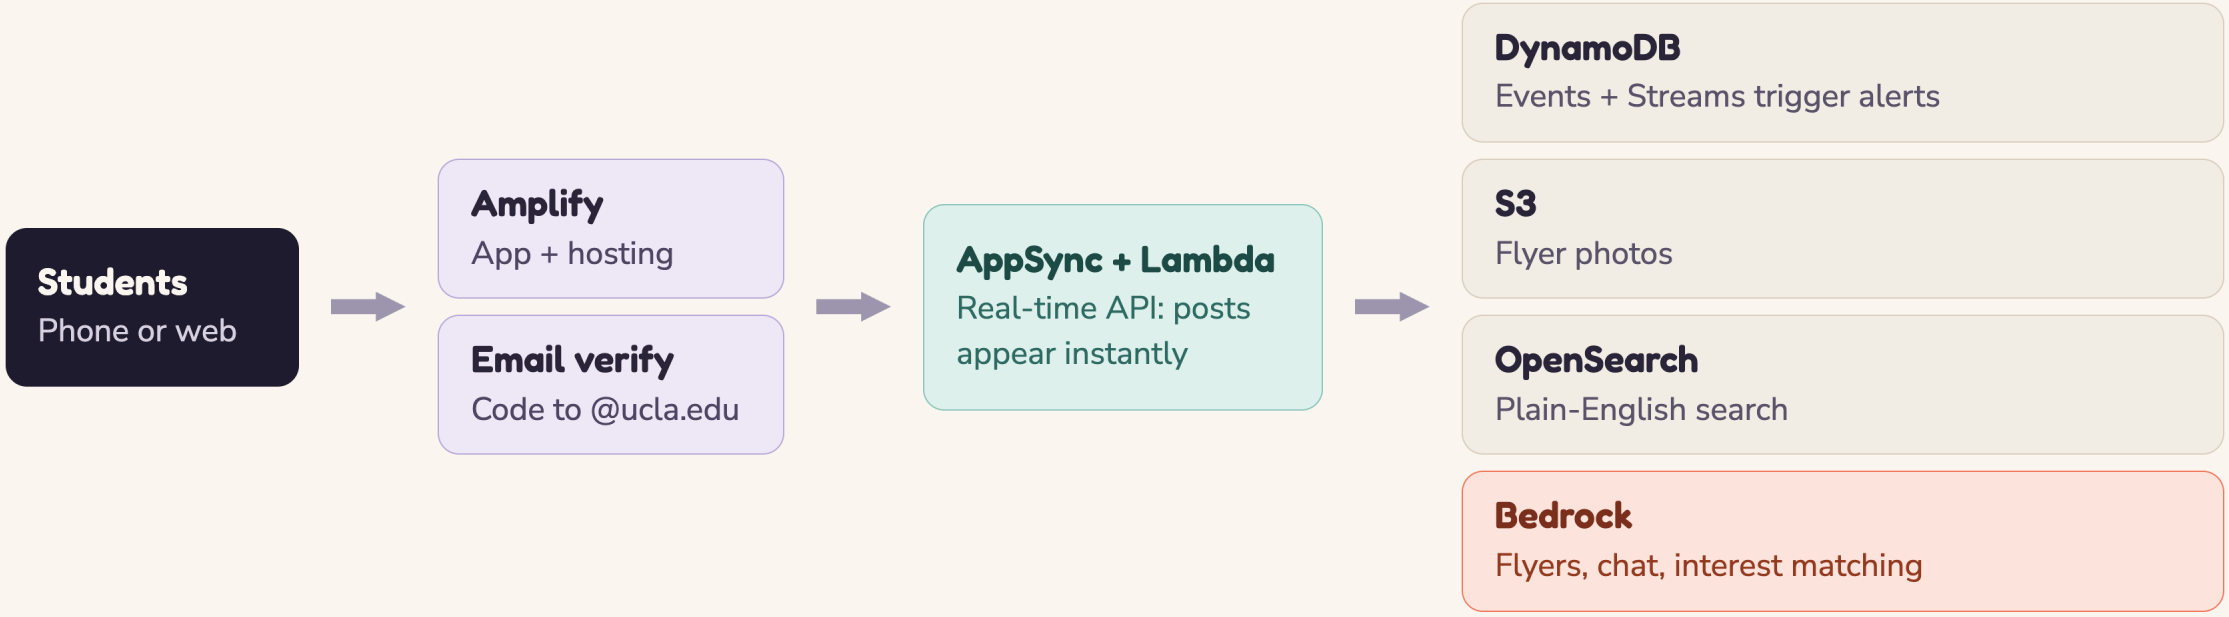

Push when something fits you

Calendar sync

Save events, get reminders

ARCHITECTURE

Fully serverless on AWS

Also · Location Service · live map · SNS · alerts · Calendar · .ics + reminders · SES · digest

AI FEATURES

Three ways AI powers Hill

Snap a flyer

Photo any Hill flyer. AI reads the title, time and place, and it's on the map.

S3 → SQS → Bedrock

Ask Hill

"Anything chill tonight near De Neve?" Chat replies with matching events.

Bedrock + OpenSearch

For you alerts

AI matches each new event to your interests and sends you a notification.

Streams → Lambda → Bedrock → SNS

THE ASK

Let’s build Hill in three weeks.

Pick it

Make Hill a club project

Staff it

Four members across frontend, cloud and AI

Fund it

Club AWS credits for a pay-per-use pilot
